CLAYGRAN®

Ceramic Dust Conditioners Conditioning Systems

The CLAYGRAN® Dust Conditioner is an economical, functional, easily installed machine that has been designed by MAP® to eliminate ceramic dusts generated by filtering, disposal and recycling processes.

Thanks to its particular technical features, use of innovative materials and its processing speed, this machine is ideal for both continuous and batch operation in heavy-duty industrial processes.

The self-cleaning chamber consists of SINT® non-stick wear-resistant material that makes daily cleaning superfluous. Quick and simple to dismantle, the machine is also extremely easy to service.
